

Implementing Water Quality Strategies in Central Texas

Friday, May 8, 2009
8:30-3:30

San Antonio River Authority Board Room
100 E. Guenther St.

RSVP by May 5, 2009

See contact information below

Clean and affordable water is central to the health of our culture, communities and economy. Aging infrastructure and regional growth, combined with the cost of implementing effective pollution controls, present significant water conservation challenges.

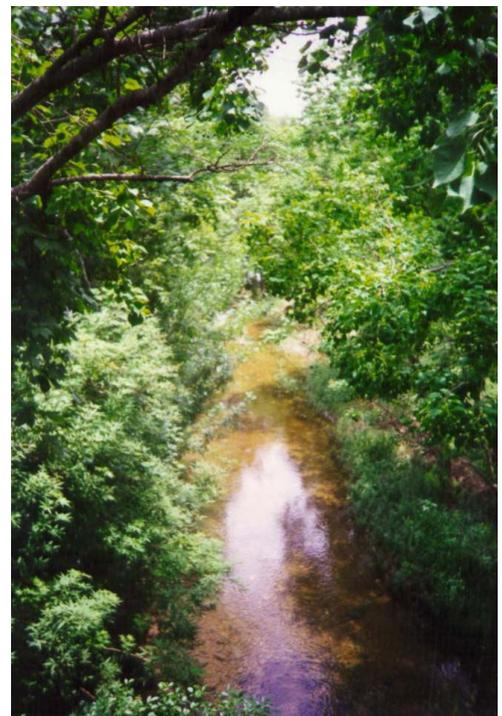

The good news is that efforts to protect our water resources are underway in San Antonio and its surrounding communities. This workshop will review these strategies, discuss current priorities and share information about how each of us can make a difference.

Please join us for informative talks and discussion about:

- Urban Animal Waste Management
- Waste Water Management
- Water Recycling
- Sustainable Development
- Watershed Planning and Implementation
- Outreach and Education
- Funding Strategies

This forum is open to the public. Representatives from Municipalities, Counties, Agencies, are encouraged to attend. Lunch will be provided at a nominal charge.

This workshop is coordinated by the River Systems Institute, Texas State University-San Marcos and funded through a US Environmental Protection Agency (EPA) Grant. Collaborators include the San Antonio River Authority, the Guadalupe-Blanco River Authority, the Texas Commission on Environmental Quality, and EPA Region 6. Several sponsors have been contacted. These organizations will be announced prior to and during this event.
