☐ **Ephemeral:** A stream which flows only during or immediately after a rainfall event, and contains no refuge pools capable of sustaining a viable community of aquatic organisms.

☐ **Intermittent:** A stream which has a period of zero flow for at least one week during most years. Where flow records are available, a stream with a 7Q2 flow of less than 0.1 cubic feet per second is considered intermittent. (Channel contains flowing water for only a portion of the year and surface water may be absent at times.)

☒ **Intermittent w/perennial pools:** An intermittent stream which maintains persistent pools even when flow in the stream is less than 0.1 cubic feet per second. (When not flowing, the water may remain in isolated pools.)

☐ **Perennial:** A stream which flows continuously throughout the year. Perennial streams have 7Q2 equal to or greater than 0.1 cubic feet per second.

6. How do you use the stream? When did these uses occur (e.g., year(s); season) and how often (times/year)?  
What location did these uses occur (get specific location and mark on a map)?

<input type="checkbox"/> Swimming	<input type="checkbox"/> Skin Diving	<input type="checkbox"/> Water Skiing	<input type="checkbox"/> Wind surfing	<input type="checkbox"/> Hunting	<input type="checkbox"/> Wading-Adults

Only fishing is done by he and his family. Reasons for not swimming or wading are that the water is generally not deep enough for swimming. Difficult finding good access to the stream. Area around 10-mile crossing is trashy and people there are thuggy. Will not allow his kids to recreate in the water.
