Several locations along Mid-Pecan Bayou

3. Have the interviewee characterize the stream flow. Since the interviewer may not be familiar with TCEQ's definitions or distinction between the different water bodies, please refer to the definitions listed below when asking the question.

☐ **Ephemeral:** A stream which flows only during or immediately after a rainfall event, and contains no refuge pools capable of sustaining a viable community of aquatic organisms.

☐ **Intermittent:** A stream which has a period of zero flow for at least one week during most years. Where flow records are available, a stream with a 7Q2 flow of less than 0.1 cubic feet per second is considered intermittent. (Channel contains flowing water for only a portion of the year and surface water may be absent at times.)

☒ **Intermittent w/perennial pools:** An intermittent stream which maintains persistent pools even when flow in the stream is less than 0.1 cubic feet per second. (When not flowing, the water may remain in isolated pools.)

☐ **Perennial:** A stream which flows continuously throughout the year. Perennial streams have 7Q2 equal to or greater than 0.1 cubic feet per second.

4. Have you or your family personally used the stream for recreation? ☒ Yes ☐ No
If yes, proceed to #6. If no, proceed to #5.

5. a. List reasons stream not used.

12. Additional comments (from the interviewee or interviewer):

This location is a very popular fishing hole. "Millions" of fisherman come here to fish. Catfish upstream and bass & crappie downstream. Never seen anyone swimming due to the number of fish hooks in the water. Also the cross-currents upstream are too difficult to navigate while swimming. Woman that was with Jesse stated that usually she was the only one down there fishing. I thought millions of fishermen were there. I don't know?
